Vision: Our Industries Free of Safety and Health Incidents

## Mine Record Entry

This report forms part of the Mine Record under s68 of the Coal Mining Safety and Health Act 1999. It must be placed in the Mine Record and displayed on Safety Notice Boards.

Note that inspection or audit activities conducted by the Mines Inspectorate are based upon sample techniques. It remains the primary responsibility of Mine Personnel to identify hazards, and risks associated with Operations and ensure those risks are at an acceptable level.

Today I attended Yarrabee Mine to conduct an inspection of the operations. Upon my arrival at site I was met by Mr Paul Stringer (SSE), Mr Dean Scott (Mining Manager), Ms Janiene Hock (HST Manager), and we discussed the following items:-

- I asked if the mine has any Cat 793 Rear Dump trucks on site, and explained that at some other mine sites there had been issues identified with the secondary means of egress on these trucks. I was informed that there are no Cat 793 trucks at Yarrabee Mine.
- I informed the group of the Continuing Professional Development seminars held periodically by the Mine Managers Association of Australia, and encouraged the group to attend future seminars should there be an opportunity to do so. I also shared with the group the topics covered at the most recent seminar held in Moranbah.
- I informed the group of the recent increased number of HPI's occurring within open cut coal mines in the Bowen Basin where fatigue / micro sleeps had been a contributing factor.
- I informed the group of how mines can have road surface frictional co-efficiency testing carried on their mine roads so they have a better understanding of their mine roads. And I also explained the benefits of a Vericom Friction measuring unit, and explained how it used.

Mr Dean Scott and myself then conducted an inspection of the open cut mining operations where I made the following observations:-

- · We inspected the Yen Pit Strip 0 where geological issues in the highwall had been a constant issue for the mining operations. The mine had very recently made a decision to write off approximately 17,000 tonnes of coal and leave it in situ due to the increasing risk posed by these geological issues in the highwall. The mining operations have now finished in this area.
- There were a number of "Give Way" signs being used at intersections where light vehicles interact with heavy equipment. I reminded Mr Dean Scott that "Stop" signs are generally regarded to be a stronger control than "Give Way" signs, and asked him to review the usage of these "Give Way" signs.
- All roads we travelled on were maintained to a satisfactory standard, and the dust

Mine Record Entry

Relased

suppression was acceptable.

Ms Janiene Hock then showed me through the mine's Safety & Health Management System which has been reviewed and restructured. I observed a real improvement in how the mine's SHMS is now structured.

I would like to thank the Yarrabee Mine team for their time, and the information they shared with me today.

Creswick Bulger Inspector of Mines **Central Region**
