

49-Sch4 - Personal Information

## Request to Remedy

### Interference with Drainage Line on Lot 153 on plan CSH546

It has come to our attention that you have constructed a farm track to obtain access to the back of your property blocking the flow of water in a drainage line that feeds water from the surrounding country to One Mile Lagoon.

In order to rectify the situation you are required to comply with the below request within two (2) months of receipt of this notice.

- Install pipes in the crossing over the drainage line in order to prevent interference with the flow of water. Alternatively you may install a bed level crossing with compacted gravel or other material that allows water to flow over the track.
- Notify the Department of Natural Resources and Mines, Gatton Office on 5466 2222 within three (3) business days of completing the work.

The department takes its legal responsibilities for the protection and management of water throughout Queensland seriously. If you do not comply with this request without a reasonable excuse the department may take further action.
